

FRP Honeycomb Panels for Dry Cargo Truck

FRP Honeycomb Dry Cargo Truck Body is made of high quality FRP Honeycomb Core Sandwich Panel with Aluminium Profiles Structure. It was fitted together through high strength aluminum extrusion with quick and easy assembly without special tooling.

FRP Honeycomb Core Sandwich Panel is made of FRP sheet and quality PP Honeycomb by vacuum bonded together in high pressure. High strength FRP sheet gives composite panels high impact resistance and flexural strength. The color gel coat on the faceplate has premium performance and it is FDA approved. With better gloss retention the whole panels look very colorful.

FRP honeycomb panels weigh about 7kg/m², which is much lighter than steel panels. Lighter weight contributes to lighter bodies and increased payload. And maintenance is very easy and no trace of repair is left, which aluminum, color steel and corrugated steel are hardly comparable with.

Size is according to your requirements.

Thickness: 15mm, 18mm, 20mm, 25mm, 30mm

Other thickness can be produced according to your requirements.

The products can be also used for building.

Product feature:

- Light weight, High strength, Insulation
- Sound and Vibration Dampening
- Water, moisture, corrosion, rot, chemical, acid, alkali, salt resistant
- Environmental protection
